## The RV Park's TV Channels & Tips

**TV/INTERNET TIPS.** Knowledge of your RV/TV requirements & limitations is important. **READ YOUR MANUAL OR CONSULT YOUR DEALER FOR HELP!**

1. Connect a **SHORT** high quality cable that is **shielded & outdoor rated** to our pedestal. Coiling, bending, crimping or travel & storage damage will cause problems.
2. Analog TVs won't work without your converter. Some new TVs don't have digital audio and there won't be sound. Flat screen does NOT equal digital.
3. **EVERY RV has an antenna booster. TURN IT OFF** or the signal will be blocked. Most have a button with a light. Some are in clothes closets. Mode selector does NOT equal booster.
4. Follow Menu/Setup instructions for receiving **DIGITAL** channels. If our channels aren't found, change inputs. Scanning **TWICE** might be necessary.
5. Unplug high frequency devices causing interference - insect repellents, radios, weather centers, fans, electronic devices, etc.
6. There may be mislabeling/cabling. Try plugging into other outlets outside your RV.
7. Many RV manufacturers don't install quality digital-capable splitters. **Even brand new RVs** might require bypassing connections, cables, splitters, equalizers, amplifiers, which can **ALL** cause problems, by cabling directly to the back of the TV.
8. **CHANNELS DROPPING = INTERFERENCE IN THE RVs SYSTEM.** Install a plug-in (powered) amplifier to solve this problem.
9. For better internet speed, along with proper security, **clear the device's browsing history/cache.** Close background applications. Point devices at access points on our light posts. Plug-in signal boosters are easy to find & install.
